Fidelity Healthcare Receivables Management Requirement Document

Client: Fidelity Healthcare Receivables Management Pvt. Ltd.

Prepared For: Salesforce Technical / Demo Team

Purpose: Customized Salesforce Demonstration

Based On: Discovery Meeting – 6 October 2026

---

1. Objective

Fidelity Healthcare Receivables Management Pvt. Ltd. is looking to streamline and automate its **pre-sales and sales process** using a centralized CRM platform.

The client currently has a sales team of approximately **5–10 people**, a separate marketing team, and an outbound calling team based in Ethiopia. They currently use HubSpot, but the client feels that the existing setup has not been implemented or utilized effectively.

The client is open to either:

- Optimizing the existing CRM setup, or
- Moving to another CRM such as Salesforce,

provided the proposed solution can effectively connect their existing tools, centralize lead sources, automate follow-ups, improve sales visibility, and minimize manual intervention.

Primary Demo Objective

The Salesforce demo should demonstrate how the client's **lead-to-discovery-call-to-proposal-to-follow-up process** can be centralized and automated while keeping human involvement in the actual sales conversation.

---

2. Client Business Context

- Industry: Healthcare-related services / healthcare receivables management
- Target customers: Doctors / healthcare professionals
- Target market: United States
- Operations: USA + India
- Sales team: Approximately 5–10 members
- Marketing team: Separate team
- Outbound calling team: Based in Ethiopia
- Current CRM: HubSpot
- Previous method: Excel-based tracking
- Calling tools: RingCentral and Dialpad
- Lead sources include:
    - Outbound calling
    - Inbound calls
    - Referrals
    - Google campaigns / paid Google advertising
    - Conferences / events
    - Landing pages
    - Social / marketing activities
- Client follows HIPAA-related requirements and is concerned about data protection and security.

---

3. Current Sales Process

The current high-level process is:

Lead Source → Lead Created in HubSpot → Outbound/Inbound Calling → Prospect Shows Interest → Discovery Meeting → Sales Discussion → Proposal → Follow-up → Closing

For outbound leads:

1. The Ethiopia team calls prospects.
2. If the prospect shows interest, the lead is entered into HubSpot.
3. The relevant sales/closer team is notified.
4. The sales person contacts the prospect.
5. A discovery call is scheduled.
6. The sales representative conducts the discovery/sales discussion.
7. If there is an opportunity, a proposal is sent.
8. Follow-ups are currently handled manually.
9. Once the client agrees to proceed, the client is handed over to the existing dedicated onboarding team.

The client stated that the post-sales/onboarding process is already defined internally, including checklists and dedicated staff. Therefore, the primary automation requirement is around the pre-sales process, rather than replacing their existing post-sales operation.

4. Key Business Challenges

4.1 Multiple Lead Sources

Leads are coming from multiple channels, but the client wants all prospects to be brought into one centralized platform.

Required centralized sources include:

- Outbound calling
- Inbound calls
- Referrals
- Google campaigns
- Landing pages
- Conferences/events
- Other marketing sources

The objective is to avoid different lead sources being managed separately.

4.2 Sales Process Is Not Sufficiently Automated

The client already has a process and team, but the process is not being executed with the desired level of automation and consistency.

The client specifically wants the CRM to help the team understand:

> What happened → What should happen next → Who needs to act → When it needs to happen

The system should therefore drive the next action rather than relying heavily on individual team members remembering follow-ups.

4.3 Manual Follow-Up Management

The sales head currently has to manually remember which prospects:

- Were interested
- Were not interested
- Need another follow-up
- Are in a “maybe/dicey” stage
- Received a proposal
- Have not responded

The client wants the system to automatically manage these follow-up activities.

4.4 Generic/Non-Personalized Communication

The client does not want mass generic email campaigns to thousands of prospects.

Instead, the requirement is focused on **interested/current prospects**.

The system should support personalized email sequences based on the prospect's current position in the sales journey.

4.5 Meeting Scheduling and Reminders

The client wants meeting scheduling to be simplified and automated.

Once a prospect agrees to a discovery meeting:

- Meeting should be scheduled.
- Calendar invitation should be sent.
- Prospect should receive meeting communication.
- Internal sales users should receive the meeting information.
- Reminder emails should be triggered automatically.
- Examples discussed include:
    - 24-hour reminder
    - 1-hour reminder
    - 15-minute reminder

The exact reminder configuration can be finalized during the implementation/discovery phase.

---

5. Salesforce Solution Requirements

5.1 Centralized Lead Management

Salesforce should act as the central platform for managing leads from different sources.

Lead Source should be captured

At minimum, the demo should show:

- Outbound Calling
- Inbound Calling
- Referral
- Google Campaign
- Landing Page
- Conference/Event
- Other

Lead Record

The demo should show a centralized lead record containing relevant prospect information and sales status.

The exact mandatory fields should be finalized after reviewing the client's existing HubSpot/Excel structure.

---

6. Lead Assignment

Once a lead enters Salesforce:

1. Lead should be created.
2. Lead source should be captured.
3. Lead should be assigned to the appropriate sales/calling team.
4. Relevant user should be notified.
5. Lead should move into the defined sales process.

The demo should demonstrate that the system can automatically route/assign leads rather than relying entirely on manual coordination.

---

7. Outbound Calling Process

The outbound calling team in Ethiopia is an important part of the client's sales process.

Required Flow

Lead → Assigned to Caller → Call → Call Outcome → Next Action

The calling team should be able to update the outcome of the call.

Possible outcomes should be demonstrated as configurable examples, such as:

- Interested
- Not Interested
- Follow-up Required
- Call Back
- Meeting Requested
- Meeting Scheduled
- No Response

Important: These values are proposed demo examples based on the discussion and should not be treated as finalized client picklist values.

---

8. Calling Integration / Call Tracking

The client currently uses **RingCentral and Dialpad** for phone communication.

The proposed Salesforce solution should demonstrate the possibility of integrating the calling environment with Salesforce so that calling activity can be associated with the relevant lead/contact.

The client also expressed interest in:

- Storing calling transactions
- Reviewing call activity

- Auditing conversations
- Potentially listening to recorded calls
- Checking whether the calling team is following the expected process

This should therefore be shown in the demo as a **calling integration and audit capability**, subject to the actual RingCentral/Dialpad integration and API capabilities available during implementation.

---

9. Human-Led Calling – AI Should Assist, Not Replace

This is an important requirement.

The client explicitly does **not** want AI voice agents to completely replace human outbound callers.

The client previously evaluated AI calling and did not find the results satisfactory.

The preferred approach is:

Human Calling + AI/Automation Assistance

AI/automation may assist with:

- Lead prioritization
- Follow-up recommendations
- Personalized communication
- Data capture
- Summarization
- Next-step suggestions
- Workflow automation

However, the actual sales conversation should remain human-led.

---

10. Automated Welcome Email

Once an interested prospect is entered into Salesforce:

Trigger

Lead becomes an interested prospect

Automation

Salesforce should automatically send a personalized welcome/introduction email.

The email should acknowledge the interaction and introduce the next step in the sales process.

The client specifically wants communication to start immediately after the prospect demonstrates interest.

---

11. Personalized Email Sequences

This is one of the most important requirements.

The client does **not** currently want large-scale generic bulk emailing.

Instead:

Interested Prospect → Personalized Email Sequence → Meeting/Proposal/Follow-up

The sequence should be triggered based on the prospect's stage and previous interaction.

Example Demo Flow

Day 0

- Welcome / introduction email

Meeting Scheduled

- Meeting confirmation
- Introduction of the salesperson

Before Meeting

- Reminder email

After Meeting

- Follow-up based on meeting outcome

Proposal Sent

- Proposal follow-up sequence

No Response

- Automated follow-up sequence

The exact timing and email content will need to be finalized with the client.

---

12. Meeting Scheduling

The Salesforce demo should demonstrate an end-to-end meeting scheduling process.

Proposed Flow

Interested Lead → Meeting Requested → Available Slot → Meeting Scheduled

Once the meeting is scheduled:

- Calendar event created
- Customer receives invitation
- Internal sales user receives invitation
- Meeting details stored against the prospect
- Automated reminders triggered

The discovery call is a key milestone in the client's sales process because the sales head/sales closer takes over after the initial qualification.

---

13. Meeting Reminder Automation

The demo should demonstrate configurable reminders.

Example:

24 Hours Before
→ Reminder email

1 Hour Before

→ Reminder email

15 Minutes Before

→ Reminder email

The exact reminder schedule should remain configurable.

---

14. Sales Pipeline Management

Salesforce should provide visibility into the complete pre-sales pipeline.

Suggested Demo Pipeline

New Lead

↓

Contacted

↓

Interested

↓

Discovery Meeting Scheduled

↓

Discovery Completed

↓

Qualified Opportunity

↓

Proposal Sent

↓

Follow-up

↓

Closed Won / Closed Lost

These stages should be presented as a **demo representation** of the process discussed. Final stage names and criteria should be confirmed with the client.

---

15. Next-Step / Follow-Up Automation

After every meaningful sales interaction, Salesforce should help identify the next action.

For example:

Scenario 1 – Interested

Lead marked as **Interested**

→ Personalized email

→ Meeting scheduling

→ Reminder

→ Discovery meeting

Scenario 2 – Proposal Sent

Proposal marked as sent

→ Follow-up task/email created

→ Automated follow-up sequence

→ Salesperson notified if no response

Scenario 3 – Call Back Required

Call outcome = Call Back

→ Follow-up activity created

→ Due date/time assigned

→ Salesperson/caller receives reminder

Scenario 4 – No Response

No response after defined period

→ Automated follow-up email

→ Additional follow-up task

→ Escalation/reminder if required

---

16. Proposal Follow-Up

Once a proposal is sent, the client wants the follow-up cycle to happen automatically rather than requiring the salesperson to remember every prospect.

The system should support:

- Proposal status
- Proposal date
- Follow-up date
- Automated email
- Follow-up task
- No-response tracking
- Salesperson visibility

The exact number and timing of follow-ups are to be finalized.

---

17. Lead Conversion

When the prospect is qualified and moves forward, the Salesforce process should support conversion into the appropriate sales records.

The demo should demonstrate the transition from:

Lead → Account/Contact → Opportunity

The Opportunity should represent the commercial sales process until the deal is won or lost.

---

18. Marketing / Lead Source Integration

The client currently uses Google paid campaigns.

Current Process

Google Ad → Landing Page → Prospect fills details / calls → Sales Team

Salesforce should demonstrate the possibility of capturing landing-page enquiries directly into the CRM.

Required Demo

Demonstrate:

Landing Page Form Submission → Salesforce Lead → Lead Source = Google Campaign → Assignment → Follow-up

---

19. Google Form / Web Form Requirement

The client specifically mentioned that a Google Form is something they would like to implement and integrate.

The technical team should therefore show the possibility of:

Web/Google Form → Salesforce Lead Creation

This should be treated as an integration requirement subject to the specific form platform/API available.

---

20. Conference / Event Leads

The client attends conferences in the United States and generates business/networking opportunities from these events.

Currently, these event-generated contacts are not systematically incorporated into the CRM process.

The demo should show how event leads can be captured with:

- Campaign/Event
- Lead source
- Prospect details

- Assigned sales person
- Follow-up status

Example:

Conference 2026 → Leads → Assigned Salesperson → Follow-up → Opportunity

The specific event/campaign fields are to be finalized later.

---

21. Referral Leads

Referral programs are another lead source.

The CRM should allow referral-generated prospects to be identified separately.

Example:

Referral → Lead → Qualification → Discovery → Opportunity

Referral source/details should be captured where required.

---

22. Inbound Calling

The client also receives inbound calls.

Inbound enquiries should be captured into the same Salesforce process as outbound-generated leads.

The objective is:

Inbound + Outbound + Referral + Marketing + Events → One Salesforce Pipeline

This centralized approach is a core requirement.

---

23. Sales Activity Tracking

Salesforce should provide visibility into activities performed against each prospect.

The demo should show:

- Calls
- Emails
- Meetings
- Follow-ups
- Tasks
- Notes
- Proposal activity
- Next action

This will help the management team understand the complete history of a prospect without relying on separate Excel files or individual team members.

---

24. Sales Management & Reporting

The client specifically mentioned reporting as one of the areas where they want improvement.

The Salesforce demo should therefore include a basic management dashboard showing:

Lead Metrics

- Total Leads
- Leads by Source
- New Leads
- Interested Leads
- Leads Requiring Follow-up

Sales Metrics

- Discovery Meetings
- Qualified Opportunities
- Proposals Sent
- Closed Won
- Closed Lost

Activity Metrics

- Calls
- Meetings
- Emails
- Follow-ups

Source Performance

Compare lead sources such as:

- Outbound
- Inbound
- Referral
- Google
- Events

This will help determine which channels are generating better opportunities.

---

25. Slack Integration

Slack was discussed as a potential internal communication and Salesforce update mechanism.

The proposed concept is:

Salesperson communicates an update in Slack → Salesforce record/activity updated

Examples discussed in the meeting include:

- Meeting scheduled
- Client converted
- Client rejected
- Client requested callback
- Next steps

The technical team should demonstrate this as an **optional Salesforce + Slack automation capability**, not assume that every Salesforce update will automatically be driven through Slack.

---

26. AI / Intelligent Automation

The client is interested in automation and is open to AI assistance, but does not want AI to replace the human sales interaction.

The demo may therefore demonstrate AI-assisted capabilities such as:

- Personalized email assistance
- Follow-up recommendations
- Call/activity summarization
- Next-step recommendations
- Prospect context
- Automated communication
- Sales productivity assistance

Any AI functionality shown should be clearly positioned as **assistance/automation**, not autonomous sales calling.

---

27. Data Security / HIPAA Consideration

The client operates in the US healthcare ecosystem and specifically highlighted the importance of HIPAA compliance and data security.

The client stated that they currently use certified tools because of the sensitivity of their business and healthcare-related information.

Therefore, the technical team should include a high-level demonstration/discussion of:

- Salesforce security model
- Access control
- User permissions
- Data visibility
- Audit/history capabilities
- Integration security
- Data protection

Important

The demo should **not claim that the proposed configuration is automatically HIPAA compliant**.

Actual compliance requirements, contractual requirements, Salesforce edition/features, integrations, data types, and configuration must be validated during the detailed technical/discovery stage.

---

28. Post-Sales Process

The client stated that its post-sales/onboarding process is already established.

They have:

- Dedicated staff
- Defined process
- Checklists
- Existing onboarding methodology

Therefore, the primary demo should **not focus heavily on replacing the existing onboarding process**.

However, the meeting discussion included a potential Salesforce service/ticketing capability.

The demo may therefore briefly show:

Customer → Service Request / Complaint → Case/Ticket → Assigned Service Team → Resolution

This should be positioned as an **additional capability / future phase**, unless the client confirms it as part of the immediate scope.

---

29. Recommended Demo Storyline

The technical team should build **one continuous end-to-end scenario** rather than showing disconnected Salesforce features.

Scenario

Step 1 – Lead Generation

A doctor submits a form through a landing page generated from a Google campaign.

Result:
Salesforce automatically creates a Lead.

Step 2 – Lead Assignment

Lead is automatically assigned to the appropriate calling/sales user.

Result:
Caller receives the lead and required information.

Step 3 – Calling

Caller contacts the doctor through the integrated calling environment.

Result:
Call activity is associated with the Salesforce Lead.

Step 4 – Interest Captured

Caller marks:

Outcome = Interested

Result:
Salesforce automatically:

- Updates lead status
- Sends personalized welcome email
- Creates next action
- Initiates meeting scheduling process

Step 5 – Meeting Scheduling

Prospect selects/confirms a meeting time.

Result:

- Meeting created
- Calendar invitation sent
- Internal team notified
- Prospect receives confirmation

Step 6 – Meeting Reminder

Automated reminders are sent.

Example:

24 hours → Reminder

1 hour → Reminder

15 minutes → Reminder

Step 7 – Discovery Meeting

Salesperson conducts the discovery call.

After the meeting, the salesperson updates the outcome.

Example:

Discovery Completed → Qualified

Step 8 – Opportunity Creation

Lead is converted.

Lead → Account + Contact + Opportunity

Opportunity enters the sales pipeline.

Step 9 – Proposal

Proposal is sent to the prospect.

Salesforce records:

- Proposal stage
- Proposal date

- Follow-up requirement

Step 10 – Automated Follow-Up

Salesforce automatically starts the defined follow-up sequence.

Example:

Proposal Sent → Follow-up → No Response → Reminder → Salesperson Task

---

Step 11 – Closing

If customer agrees:

Opportunity → Closed Won

If customer declines:

Opportunity → Closed Lost

Loss reason should be captured for reporting.

Step 12 – Management Dashboard

Management can view:

- Lead volume
- Lead sources
- Calling activity
- Meetings
- Opportunities
- Proposals
- Follow-ups
- Won/Lost
- Conversion performance

---

30. High-Level Salesforce Components for Demo

Area	Salesforce Component / Capability
Lead Management	Leads
Customer Management	Accounts / Contacts
Sales Pipeline	Opportunities
Activities	Tasks / Calls / Emails / Events
Lead Source Tracking	Lead Source / Campaign
Automation	Salesforce Flow / Automation
Email	Email Templates / Automated Emails
Meeting Scheduling	Salesforce Calendar / Scheduling capability
Follow-ups	Tasks + Automated Flows
Calling	RingCentral / Dialpad integration – subject to API
Web Leads	Web Form / Integration
Campaigns	Salesforce Campaigns
Reporting	Reports & Dashboards
Internal Collaboration	Slack integration
AI Assistance	Salesforce AI capabilities, subject to edition/licensing

Customer Requests	Cases / Service capability – optional/future
Security	Roles, Profiles/Permission Sets, Sharing, Audit capabilities

---

31. Priority Matrix for Demo

Priority 1 – Must Demonstrate

1. Centralized Lead Management
2. Multiple Lead Sources
3. Outbound Calling Process
4. Lead Assignment
5. Lead Qualification
6. Personalized Welcome Email
7. Meeting Scheduling
8. Meeting Reminders
9. Sales Pipeline
10. Automated Follow-ups
11. Proposal Follow-up
12. Lead Conversion
13. Sales Dashboard / Reporting

Priority 2 – Should Demonstrate

1. RingCentral / Dialpad integration concept
2. Call activity tracking
3. Call audit / recording concept
4. Google/landing-page lead capture
5. Referral tracking
6. Conference/Event lead tracking
7. Slack integration
8. AI-assisted personalization
9. AI-assisted follow-up / next action

Priority 3 – Optional / Future Scope

1. Post-sales service management
2. Complaint/ticket management
3. Advanced AI capabilities
4. Advanced campaign automation
5. Additional third-party integrations
6. Advanced onboarding automation

32. Final Technical Demo Objective

The Salesforce demo should ultimately prove the following business proposition:

> **A prospect can enter from any lead source, be assigned to the right person, be contacted, qualified, scheduled for a discovery meeting, receive personalized communications and reminders, move through the sales pipeline, receive automated follow-ups after the proposal, and finally be converted — with Salesforce maintaining the complete history and reducing manual intervention.**

The most important message for the demo should therefore be:

“Connect the existing tools and people into one automated sales process rather than asking the client to replace everything.”

This directly addresses the client's stated requirement that they already have the **team, software, and systems**, but need someone to **“connect the dots”** and make the overall process work smoothly.
